Lectures

When cancer becomes a bloody nightmare: How to deal with a haemoabdomen

Presented by veterinary specialists Owen Davies & Helen Wilson

Our oncology and critical care specialists will discuss the latest thoughts on management of spontaneous haemoabdomen in a practice-based setting, aiming to give people confidence in answering questions such as: 'Do I need to use crystalloids or colloids?', 'Does the patient need transfusing?', 'How can I tell what the prognosis is?', 'Is it worth 'putting them through' the surgery?' and 'Are there any systemic complications I need to be aware of?'.

Ureteral obstruction in cats: Intensive kidney care & ureteral bypass

Presented by veterinary specialists Guillaume Ruiz & Ivan Doran

Acute kidney injury associated with ureteral obstruction is being increasingly diagnosed in cats, often at a young age, and can have serious and irreversible consequences if left untreated. Join us to discover more on when to suspect and diagnose it, and what are the current medical and surgical therapeutic options and long-term management.

Hindlimb lameness: A twist in the tale

Presented by veterinary specialists Nicolas Granger, Delphine Holopherne-Doran & Dan Ogden

Hindlimb lameness in our patients is often a straight forward diagnosis - but not always! Ortho? Neuro? Both? Our specialists will share some challenging cases with you and discuss diagnostic and treatment options for these non-conventional hindlimb lameness patients.

What's new at Highcroft Referrals

Presented by the Highcroft Referrals Specialists

There are lots of exciting new things happening at Highcroft at the moment - new Specialists, new disciplines, new equipment... Let us take you on a tour of our new Referrals services.
